

## **Working with the NHS Northwest Innovation Agency December 2022**

At the December meeting of the Patient and Public involvement Senate, the first presentation was about an App in development by one of the group members who has a company (Ability Consultancy).

<https://www.ability-consultancy.co.uk/>

The purpose of the App is to demonstrate how life is for people with disabilities. It can create images of how situations appear to people with visual disorders, so it can show how a room would look, for example to someone with tunnel vision, macular degeneration and various other sight disorders.

It also provides British Sign Language poses for common words and phrases.

It is hoped that the completed version will be available by the end of March 2023.
